

DIRECT MOUNT (PIPE TO FLANGE)

Coplanar mounting Five Valve Manifold with drain plugs. This manifold has two isolating valves, one equalizer valve & two vent Valve. when assembled to transmitter has the advantage of compact size with easy for operation in minimum space. The direct mounting facility to the base of the differential pressure transmitter result in less leakage points and more accurate measurements. This model mainly use for Rosemount Transmitter Model 3051 the manifold Dimensions illustrated one for standard 54 mm instrument center but available for other center on request
